Coffee and tea

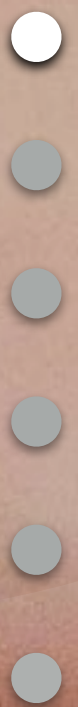

# How we manage your water needs?

## 1

### Source

Our source of natural water is located at one of the most beautiful natural places in Slovakia - foot of Vihorlat hills. Over 130 meters under the ground, there is the cleanest water that we are able to get and distribute to make our clientele refreshed and happy at any given moment of the day.

# How we manage your water needs?

## 2

### Hygiene

Before we fill the bottles, sanitation phase with use of water and ozone is initiated. Our natural water's parameters are regularly tested in certified laboratories to meet even the most strict hygiene standards and requirements of national health authorities.

## How we manage your water needs?

# 3

### Filling

Once water is pumped from the source, it is poured into 18,9 liter polycarbonate bottles. The whole process is managed by fully automated line where a bottle is washed, disinfected, filled with water and sanitarily sealed. The bottle is now marked with the dates, recorded in our system and ready to be shipped.

# How we manage your water needs?

## 4

### Distribution

Every day our trucks arrive at our logistic centers delivering fresh water right from the source. Once they are unloaded, our smaller trucks for local distribution capable of delivering 2500 bottles are loaded and sent on their way. This system makes us flexible to your needs.

# How we manage your water needs?

## 5

### Filtration

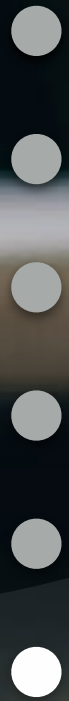

All of our water coolers are equipped with filters from 3M, an international company with over 100 years of history in different markets across the globe. Thanks to 3M's newest technologies and research & development we can provide quality, safe, energy efficient and environmentally friendly solutions.

## 6

### Refreshment

Stopping at one of our water station and pour a glass of water is not only a great way to say goodbye to your thirst, it is also an ultimate starter of conversations between coworkers and a launching base for new ideas, cooperation and company initiatives.
